This instruction is for Outdoor version of the X108G firmware update.

If the first number of your X108G's serial number is 1, please use this latest firmware.

Before you update the firmware, please keep a record of the factory data of your X108G. The operating procedure is as follows.

A. Press F1 and hold on, start your X108G at the same time.

B. At this point, you will see the engineering data displayed on the screen. Please record the data, item 1-5 and item 11.

C. Close your X108G, finished.

Now, you can update the firmware of your X108G.

Firmware update tutorial:

1. Connect the USB cable to the computer, press the frequency knob (keep the action), turn on.

2. Open " My computer", there is a Update X108 (*:) mobile storage device.

3. Open Update X108 (*), delete the file, this time on the radio will show delete progress (waiting for progress to complete 100%).

4. Copy the latest firmware to the Update X108 (*:) to wait for replication to complete, and then disconnect the USB and the

computer.

5. Restart X108G, firmware update is completed!

When you complete the firmware update, close your X108G. Press F1 and hold on, start your X108G at the same time, please check the factory data, if the factory data consistent with the data you recorded before, you don't need any action, you can choose "Exit" to get into the X108G's working state. Otherwise, you need to adjust the data of item 1-5 and item 11 to the data you have already recorded, and save it. Then you can choose "Exit" to get into the X108G's working state.
